

An Enterprise-Class, Patent Pending Technology Platform

- A fully integrated ‘Purchase To Payment’ software platform that is completely modular and customizable at client level down to individual user settings
- New code base (January 2019) on SnapAP’s cloud-native plus serverless architecture model - supports rapid scaling without resource limitations
- Able to execute bi-directional real-time syncing with both third-party cloud applications as well as any legacy, on-premise ERPs or proprietary software
- SnapAP’s Universal Connector (patent pending) automatically maps the relevant external database fields and allows non-technical users to finalize any ERP integration without APIs management on a no-code basis
- Multi-currency SnapAP Payments module is fully “tested & proven” for any transactions processing via standard banking providers located in Canada, USA, EMEA plus Australia
- SnapAP ‘best in class’ Azure AI-powered OCR Documents Import feature offers 97% accuracy, compared to 70% as industry average

Q. What Does SnapAP Offer?
